

M-CARBO Marlin 900 Series Trigger Spring Kit

Installation Instructions www.mcarbo.com

For more info or support: info@mcarbo.com

Attention: Before you begin, be certain the firearm is clear and safe.

Follow the instructions in your owner's manual to remove the trigger mechanism from your rifle.

Step 1: Push the safety lever to "fire"

Step 2: Push the bottom C-clip off the trigger pin.

Step 3: Push the pin out; then remove the trigger and stock trigger return spring

Sear Spring (Don't touch)

Trigger Return Spring (only one we remove)

Step 4: Install the M-CARBO trigger return spring. Place the new spring on the metal portion of the trigger. The other end lays flat against the Sear inside the trigger housing.

Step 5: Move the trigger into position and line up the holes to install the pin from the safety side.

It may be necessary to move the safety lever to help line up the holes

Step 6: Re-install the C-clip

After you have reassembled your Marlin 900 Series make sure you do a function check. Cycle the action and load a snap cap or spent shell casing into the chamber. With the rifle safety on "safe" and the barrel pointed in a safe direction, verify that the rifle will not fire when you attempt to pull the trigger. Place the safety now on "fire" and now verify the hammer falls.
